

Grel: from a feature list to a clear next step.

A redesigned discovery and plan-selection experience for a real-estate learning platform.

THE DESIGN CHALLENGE

Help prospective members understand what Grel offers and compare plans without decoding long lists or relying on unsupported promises.

PROJECT TYPE

UI/UX concept redesign

SCOPE

Home + plans · Desktop + mobile

DELIVERABLES

Flow, wireframes, system, screens, prototype

01 / Start with the evidence

Source material: two supplied PDF captures of the original Grel Home and Plan pages. No analytics, interviews or product access were supplied.

Observed in the supplied design	Likely usability risk	Redesign response
Several competing offers and long feature descriptions.	Visitors may struggle to explain the core offer.	One value proposition; three capability groups.
Different plan-card heights and inconsistent feature lists.	Comparing equivalent benefits requires extra effort.	Aligned cards plus a shared comparison table.
Pro and Master both display \$25; positioning overlaps.	Price alone does not explain the difference.	State intended audience; flag pricing for review.
Repeated FAQ questions and placeholder explanatory copy.	The page leaves important decision questions unresolved.	Distinct questions; concise, policy-dependent answers.
“6x more income, guaranteed”, “No. 1” and logo proof.	Claims and associations need substantiation.	Omit unverified proof; request evidence before launch.

02 / Requirements before pixels

Proposed brief inferred from the source pages. It should be reviewed with the product owner before implementation.

Priority	Requirement	Acceptance condition
Must	Explain training, scripts and business tools.	A first-time visitor can identify the offer after the hero.
Must	Support a fair comparison of all three plans.	Same feature categories and billing language for every tier.
Must	Provide a usable mobile experience.	No horizontal page overflow; clear labels and touch targets.
Must	Keep billing and proof claims honest.	Annual rates, renewal and cancellation terms verified before launch.
Should	Show a concrete example of product value.	Product preview is identifiable as illustrative, not live data.
Could	Add verified customer stories later.	Quote consent and original evidence are available.

03 / Users and jobs to be done

These are provisional audience hypotheses, not personas derived from interviews.

The developing agent

Needs a practical foundation and tools for real conversations. Job: “Help me know what to learn next and how to use it.” Likely question: “Will this fit around my work?”

The established agent

Wants more focused learning and a broader toolkit. Job: “Help me identify what adds value beyond the basics.” Likely question: “What is different about Master?”

The property investor

Looks for investment-specific learning and resources. Job: “Help me find the material relevant to my investing work.” Likely question: “Is this agent training or investor training?”

Questions to validate

What triggers the search for training? Which plan differences matter? Do users understand the designation terms? What billing details do they need before deciding? Would a real lesson sample increase confidence?

04 / Information architecture and decision flow

Primary path: understand the offer → compare plans → inspect a suitable plan. Checkout and account creation are outside this concept's scope.

Key design rule

Show the decision-relevant information before asking for commitment. Unconfirmed annual pricing leads to an explanatory state, not a fabricated discount.

05 / Basic structure and wireframes

The low-fidelity layouts prioritize hierarchy and decision-making before color or visual polish.

HOME: explain → demonstrate → compare

PLANS: orient → compare → clarify

06 / Color and typography decisions

Preserve the original blue brand cue, while replacing broad gradients with quieter surfaces and a stronger text hierarchy.

Action blue

#2455D6

Text navy

#14243B

Secondary text

#58677D

Soft surface

#EFF4FF

Page background

#F8FAFD

Font selection

DejaVu Sans is used throughout the editable boards and prototype. Its open license, distinct characters and bundled font files keep the deliverables consistent without a paid font dependency. Regular supports body copy; bold carries headings and actions.

Aa 012345

Display 48–56

Heading 32–36

Body 16–18

Label 12–14

Alternatives considered: Inter for a more compact UI voice; a geometric display face for brand expression. The selected single-family system avoids extra visual competition and simplifies handoff.

07 / Components and interaction states

Reusable structure is defined; native Figma components and Auto Layout must be created after import.

Component	States / behavior	Design rule
Primary button	Default, hover, focus, disabled when unavailable.	One emphasized action per decision group; 44 px minimum height.
Plan card	Default and selected-tier review.	Use the same content order and comparable spacing.
Billing selector	Monthly selected; annual information state.	No invented annual rate or savings percentage.
FAQ disclosure	Question / answer detail; keyboard activation.	One distinct question per item; no duplicated content.
Plan-review dialog	Open / closed; Escape; return focus.	Explain the selected concept tier; never submit a real purchase.
Navigation	Desktop links; mobile menu.	Visible labels and logical keyboard order.

08 / Final home page

The main improvement is the order of information: value first, concrete product context second, and a clear route to comparison.

01 — A specific promise

“Build your skills. Put them to work.” connects learning with use, without promising income or sales outcomes.

02 — Show the experience

A compact illustrative dashboard makes training, scripts and tools tangible. Replace it with approved product screens before launch.

03 — Reduce repeated persuasion

Three capability groups and a short process replace a succession of competing feature pitches and unsupported social proof.

One place to learn. More ways to act.

Move from knowing what to do to having the tools to do it.

01

Practical training

Build confidence through structured lessons you can fit around your work.

02

Conversation scripts

Prepare for buyer, seller and prospect conversations with useful prompts.

03

Business tools

Turn learning into action with checklists, templates and planning tools.

Start with your next goal.

01

Choose a plan

Compare what is included and who each plan is for.

02

Follow a learning path

Build your knowledge one practical lesson at a time.

03

Use it in your work

Bring the scripts and tools to your next client conversation.

A clear next step for your career.

Compare plans by your goals, not by a long list of promises.

Compare plans

09 / Final plans page

The concept changes the comparison model, not merely the color of the pricing cards.

01 — Explain who each plan is for

Goal-oriented descriptions are proposed to clarify the equal Pro/Master prices shown in the source. Validate those distinctions with Grel.

02 — Compare the same attributes

A shared table gives each tier the same comparison categories. Entitlements shown here are a content model, not verified product policy.

03 — Resolve uncertainty honestly

Annual pricing remains unconfirmed. The prototype exposes that missing information rather than pretending to calculate an offer.

10 / Responsive decisions

Mobile is restructured for scanning and touch rather than simply shrinking the desktop artwork.

One place to learn.
More ways to act.

- 01 Practical training**
Build confidence with structured lessons that fit around your work.
- 02 Conversation scripts**
Prepare for client conversations with useful prompts.
- 03 Business tools**
Put your learning into action with templates and checklists.

Your next step.

- 1 Choose a plan**
Compare by your professional goals.
- 2 Follow a learning path**
Make steady, practical progress.
- 3 Put it to work**
Use a script in your next conversation.

Ready for your next step?
Compare plans

Mobile adaptations

Stacked cards preserve one reading order.

Primary actions span the available width.

The decorative dashboard leaves the hero.

Plan names, prices and key features stay together.

Body copy remains readable at normal zoom.

The menu opens without relying on hover.

The mobile plans board prioritizes stacked summaries. Test whether users also need a dedicated side-by-side comparison pattern.

11 / Accessibility and content quality

These are design checks and implementation targets. This concept has not undergone a full accessibility audit.

White on action blue

6.28:1 contrast

Text navy on white

15.61:1 contrast

Secondary text on white

5.75:1 contrast

Interaction

Keyboard access, visible focus, native buttons, Escape-to-close dialogs, and focus restoration.

Responsive reading

Reflow at 320 px and 200% text zoom should be tested. Do not use color alone for plan selection.

Honest content

No invented testimonials, customer counts, conversion lifts, revenue guarantees or live enrollment.

Before production

Confirm policies, legal copy, actual product screenshots, link destinations and accessible screen-reader labels.

12 / Validation plan: measure the design

Proposed moderated usability study. No participants have been recruited and no results are claimed.

Task	Observe	Proposed success criterion
Explain Grel after viewing the hero.	Comprehension of training, scripts and tools.	At least 4 of 5 participants describe the core offer.
Choose a tier for an agent or investor scenario.	Decision time, wrong assumptions, confidence.	At least 4 of 5 select and explain a relevant tier without help.
Find what makes Pro and Master different.	Comparison-table discovery and terminology.	Participants find a meaningful difference within 60 seconds.
Check the annual billing option.	Recognition of the unconfirmed-rate state.	No participant mistakes the state for a purchasable offer.
Complete the same path on a phone.	Touch errors, text scaling and navigation.	No blocking overflow, focus trap or unlabeled control.

Recruit across the three proposed audience groups. Record task success, time, critical errors and a 1-5 ease rating. Revise the design after the first round.

13 / What changed — and what remains open

A defensible case study distinguishes design output from measured business impact.

Delivered

Two page concepts across desktop and mobile; low-fidelity wireframes; color and type decisions; component states; a clickable local prototype; editable SVG boards and a Figma assembly guide.

Expected benefit, not a result

The new hierarchy should help users understand the offer and compare plans. Whether it improves conversion, task success or retention must be tested; no uplift is claimed.

Open question	Owner / next step
Are Pro and Master truly the same price?	Product owner: confirm commercial model.
What is included in each tier?	Product + content: approve entitlement matrix.
What are trial, annual and cancellation terms?	Business owner: provide current policy.
Which product previews and proof can be published?	Brand/content: approve evidence and assets.

14 / How to showcase this in your portfolio

Present a concise project card that opens the full case study. Do not add it to the live website until you approve this direction.

PROJECT CARD

Grel — a clearer path to the right plan

UI/UX concept redesign · Responsive web · Information architecture · Plan comparison

01 / Lead with the problem

Explain the difficulty of understanding the offer and comparing plans.

02 / Show the thinking

Include one annotated source crop, the flow, and the two wireframes.

03 / Show the solution

Feature the desktop home, pricing comparison and mobile plan screens.

04 / Be clear about the evidence

Label this a concept redesign; include assumptions and the proposed test plan.

15 / Figma handoff and project narrative

The supplied SVGs are editable import assets. They are not a native .fig file, component library or published Figma prototype.

Suggested Figma pages

00 Brief & evidence

01 Flows & wireframes

02 Foundations & components

03 Desktop & mobile screens

04 Prototype & validation

Assembly sequence

Install the included DejaVu Sans fonts. Drag the seven SVG boards into Figma. Convert repeating controls into components; create variants for focus and selection. Apply the documented grid and spacing tokens with Auto Layout. Connect Home → Plans → Review tier and add a mobile variant.

Suggested portfolio wording

“I revisited my earlier Grel page designs to improve information hierarchy and plan comparison. This concept documents my design decisions, responsive layouts and a test plan; the proposed improvements have not yet been validated with users.”
